frametube cross-section (if not round)	
frametube cross-section oval	
frametube cross-section by sketch	

Base model: Suitable for the most available chairs	799,-€ netto plus Extras
---	---------------------------------

Adaptable Outdoorfun for manual Wheelchairs.
Suitable in combination with foldable and rigid chairs with or without electric auxiliary drives.

Important Advice

In order to make a reliable quote we need pictures of the front part of the wheelchair. We decide on the base of the pictures which adapters are suitable for the chair. The following pictures are required:

1. A clear front view of the wheelchair in order to recognize the course of the frame tubes and all existing attachments, camera about 20cm above and parallel to the ground, well illuminated, good resolution
2. A clear side view of the wheelchair in order to recognize the course of the frame tubes and any attachments, camera about 20cm above and parallel to the ground, well illuminated, good resolution ... ;o)

The base model contains all necessary components to mount the SmartWheel on almost all manual wheelchairs. Extras, special adapters and special designs are charged separately. Special adapters for V-frames, oval tubes or frame geometries deviating from the standard are not included

All prices quoted are net prices and are subject to VAT and shipping.
